Art Unit: 1731

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 85/03962 in view of DUNNING et al (3,349,035) or APPEL (4,375,4458).

WO 85/03962 teaches a method of making tissue paper by preparing a fibrous suspension (2), transferring the layer of fibers (12) to a profiling belt (16) and pressing the profiling belt (16) between embossing rolls (18 and 20). APPEL or DUNNING et al teach moistening the belt during pressing to ensure proper moisture content of the web. It would have been obvious to the artisan to provide the water sprays of APPEL (131) or (135) or DUNNING et al (174, Figure 12 or nozzles Fig. 5) during the pressing and bonding WO 85/03962 to ensure the web is at the proper moisture content for embossing and bonding. WO 85/03962 teaches that the embossing rollers could be smooth rolls and web 16 could do the embossing instead (page 4, lines 8-13).

The restriction requirement is repeated and made Final.

The non-English references could not be considered as translations were not supplied.
